

HA Squeeze cheat sheet

QuantEdge paper trading | Daily HA side + 5m EMA 200 / SuperTrend 5,1 / Squeeze 34 | ATM or 1 ITM

Before you click Buy

#	Filter	CALL (CE)	PUT (PE)
1	Yesterday daily HA (completed)	Green -> CE only	Red -> PE only
2	200 EMA high / low band (5m)	Close above EMA-high	Close below EMA-low
3	SuperTrend 5, 1 (not 10,3)	Price above ST	Price below ST
4	Squeeze Momentum BB 34 / KC 20	Light green (not dark)	Light red (not dark)
5	Zero-line cross	Histogram crosses up	Histogram crosses down
6	Heikin-Ashi break	Break prior HA high	Break prior HA low
7	Session	09:15-15:15 IST	Same
8	Expiry	DTE >= 2 (skip T-1 / expiry day)	Same

Scanner row -> what you do

Setup	Meaning	Action in QuantEdge
CALL ENTRY / PUT ENTRY	All filters + HA break	Buy ATM or 1 ITM. SL = ST +/- buffer.
CALL READY / PUT READY	Aligned, waiting for HA break	Watch. Do not front-run the break.
WAIT CALL / WAIT PUT	Daily bias only	No trade. Wait for band + ST + light squeeze.
No Option Buying row	Not ENTRY/READY	Do not deploy. Scan again later.

How to run it inside QuantEdge (web or desktop)

Step	Where	Click
1	Algo tab	Mode = paper (DB only, no Dhan order)
2	Scanner tab	HA Squeeze (NIFTY, BANKNIFTY, SENSEX, FINNIFTY)
3	Stock Scanner	Read Signal. Filter = HA Squeeze setup
4	Option Buying	ATM + 1 ITM of the allowed side, DTE >= 2
5	Double-click a row	Opens Strategy Builder with BUY CE/PE
6	Strategy tab	Deploy (new) -> virtual trade in journal

Stop, exit, size

Trail SuperTrend with a buffer on candle CLOSE (not a wick): Nifty 15 pts, Bank Nifty 30, Sensex 50. Exit when ST flips or Squeeze turns against you. Dark squeeze while ST is still valid is a yellow light - stay, stay alert, do not reverse. If you exited on Squeeze and ST is intact, re-enter on the next light-color HA break. ATM or 1 ITM only - never OTM. Month-1 aspiration is about 100 Nifty points after costs.

Do not mix this with the TradingView triangles blindly

QuantEdge scanner uses the FULL stack above (band + SuperTrend + light squeeze + HA break). Paper entries follow the scanner row, not a first-color-flip on the chart. One system trade is not overtrading. A click outside these filters is.
